

SUBMERSIBLE DRAINAGE

RS32EA

NEW!

SHALLOW WATER CONTROL

- Industry
- Domestic
- Lift shafts
- Basements
- Tanks
- Narrow sumps

The **RS32EA** is a compact, automatic submersible pump with a miniature float-switch designed to control very shallow water levels. To block obstructions, the mechanism is housed within a chamber to ensure unhindered operation, consequently this pump is also suitable for sumps with limited space. With the added feature of a narrow operating range (on at 50mm - off at 25mm) it is particularly suited to flat or awkward areas where there is not a sump e.g. lift shafts, concrete channels, pre-formed vessels etc.

Constructed in thermoplastic, the **RS32EA** is designed for clean and slightly dirty water. The stainless steel shaft is fitted with a carbon/ceramic mechanical seal, an intermediate oil chamber and inner lip seal. For increased reliability it is fitted with an anti-airlock device. This model offers excellent reliability in domestic, trade and industrial applications, where high quality of construction at a low price is required. Supplied with 10 metres of heavy duty rubber power cable.
